# LivePicture<sup>®</sup> *A living, breathing painting*

LivePicture from Mobilane is a living picture using plants which create a green and beautiful living and working environment. This unique sustainable planted system is not only good for the interior environment but also helps to create a calming impression.

Plants have health advantages and contribute to a feeling of wellbeing, but can take up valuable space. Mobilane has developed LivePicture to give these benefits without the loss of floor space. Besides the health and the space-saving advantages

LivePicture is also an easily maintained and attractive feature. The plant cassettes can be easily changed in moments and only need watering every 6 weeks.

Due to its innovative design LivePicture requires no power source meaning that it can be installed virtually anywhere. The benefits of using LivePicture include cleaner air, improved humidity, reduced noise pollution, lower stress levels and increased productivity levels.

# LivePicture® *A living, breathing painting*

PERSONALISED  
FRAMES ARE  
AVAILABLE

LivePicture is available in 3 different coloured frames (white, silver and charcoal). Personalised frames can be created on request (shown above). Inside the frame the plants are installed in a plant cassette. The plant cassettes can easily be exchanged enabling you to change the plants to reflect the different seasons. LivePicture is mounted onto a wall using only three bolts.

## BENEFITS

- » Integrated irrigation system
- » Refill with water every six weeks
- » No electricity or water pump required
- » Can be mounted onto every surface
- » Quick and easy installation
- » Plant cassettes can easily be exchanged
- » The frame of LivePicture can easily be customised with a logo, special design or image

## Specifications

### Dimensions in millimetres (LxHxD)

#### LivePicture small

(41" – 1 plant cassette)

725 x 725 x 105 mm

With plant cassette 145 mm depth

#### LivePicture large

(53" – 2 plant cassettes)

1125 x 725 x 105 mm

With plant cassettes 145 mm depth

## Colours

White

Silver Grey

Charcoal/Anthracite

## Weight

Small - 10kg empty & 30kg loaded

Large - 12kg empty & 40kg loaded

LARGE AND  
SMALL SIZES  
AVAILABLE

SUITABLE FOR  
PLANTS, HERBS  
AND SOME  
SALAD LEAVES

# LiveDivider® *The green room divider*

LiveDivider from Mobilane is a room divider which is planted on both sides. Room dividers offer privacy and a feeling of wellbeing within any indoor environment. LiveDivider contributes to visual privacy and helps to reduce ambient noise.

LiveDivider consists of a metal frame that stands on either a fixed or mobile base. On each side of the LiveDivider frame there are six plant cassette inserts. The exchangeable plant cassettes means that you are able to change the plant varieties to reflect the season or to theme with special events or designs.

This unique system provides your living or working environment with an instant green and beautiful atmosphere. This sustainable system is not only

a benefit for the indoor environment and creates privacy but also contributes to a calming and relaxing atmosphere.

Due to its innovative design LiveDivider requires no power, will keep the plants healthy and only needs watering every four weeks. LiveDivider can be used in most situations providing there is enough light. The plants in the LiveDivider will maintain a pleasant humidity in a room and will reduce the carbon monoxide and pollutant particles in your environment.

## BENEFITS

- » Integrated irrigation system
- » No electricity required
- » No water pump required
- » Easy to move
- » Visual privacy
- » Reduces ambient noise
- » Water every four weeks
- » Provides a healthy indoor environment and increased oxygen levels
- » Easy to change plant cassettes

## Specifications

**Dimensions in millimetres (HxWxD)**  
1770 x 1030 x 130 mm

## Colours

LiveDivider is powdercoated in white or stainless steel. Other colours are available on request.

# LivePanel® *To green your wall*

LivePanel from Mobilane is an innovative system for vertical green walls. With over 90 years of experience in horticulture Mobilane has developed a unique new system for facades and walls. LivePanel is suitable for both existing and new build projects. Living walls are beneficial for the environment – they reduce carbon monoxide and pollutant particles (PM10s) – they also provide a beautiful and stunning environment.

LivePanel consists of a modular system with interchangeable plant cassettes. These plant cassettes have planting cups in which the plants are placed. Each row of cassettes is fixed into a gutter profile. This gutter profile functions as a water container. By using a capillary action, the cassettes take the water out of the gutter to the plants. As a result the system can operate without a pump unit.

LivePanel offers the flexibility which means it is suitable for a number of vertical planting applications. The system can be used both indoor and outdoor. LivePanel can be easily installed on either existing or new walls.

Mobilane works with a number of recommended installers who have the knowledge and experience to provide a first class finished product.

**CONTRIBUTES  
TO A HEALTHY  
INDOOR  
CLIMATE**

## BENEFITS

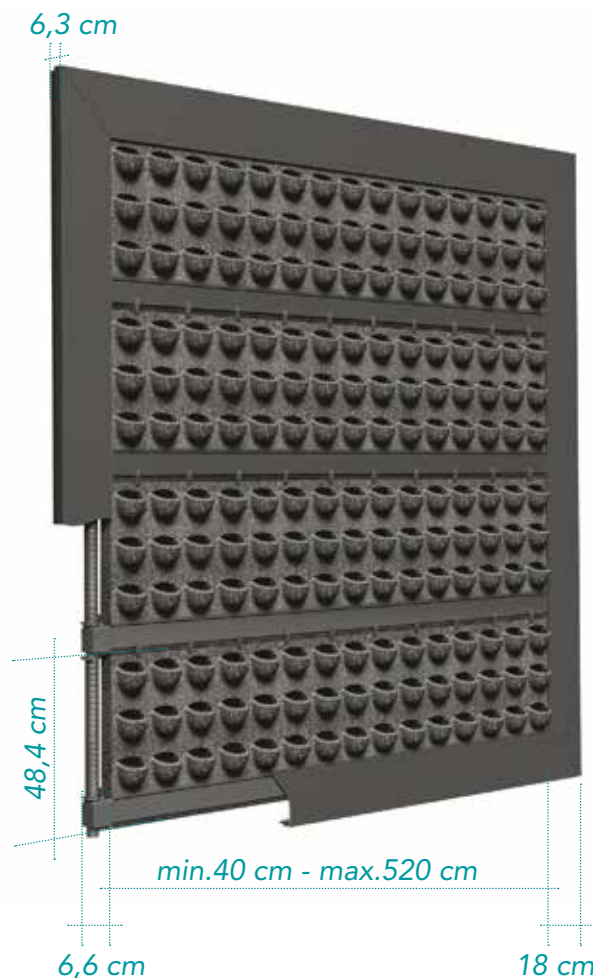

- » Flexible system for indoor and outdoor
- » Creative freedom in design and plant choice
- » Simple exchangeable plant cassettes
- » Contributes to a healthy indoor climate by providing oxygen
- » Easy and quick to install
- » Neat, smooth and robust design
- » Minimal water requirement
- » Low maintenance
- » Odour free system
- » Recyclable

WITH POOR LIGHT QUALITY AREAS  
IT IS ADVISABLE TO INSTALL  
DAYLIGHT LAMPS **SEE PAGE 11**

# LivePanel<sup>®</sup> To green your wall

## Specifications

### Dimensions

The maximum profile length is 5200 mm excluding the end caps. There are two types of end caps – blind and water flow – these can be installed mirrored on the wall. For every 5200 mm wall length a water flowcap will be installed. Modular system based on cassettes of 400 x 400 mm.

### Colours

The frame will be standard available in charcoal colour, the same colour as the gutter profiles. Other colours are available on request.

### Weight

40kg/m<sup>2</sup> including plants and water.

### Profiles

Both the profiles and the (optional) frame can easily be adjusted by the installation team to the preferred size provided that the grid size is minimal 400 x 484 mm (excluding end caps).

### Recommendations

- A waterproof covering on the wall is recommended
  - Drainage for overspill (when filling the wall only) is required
  - Installing an automatic control unit for larger walls is recommended.
- The system needs an average water supply of 5 litre/m<sup>2</sup> planted surface per week. This depends on the local conditions for example plants, temperature, air-conditioning and the amount of light.

*The success of LivePicture and LivePanel depends to a degree on the quality of light available. Normally plants grow under sunlight and will use daylight*

*spectrum. Since not every location has sufficient daylight, Mobilane has added appropriate lighting to the product range which will cater for this.*
